

USA - New York State

BMTB 200
Domestic family home
2018
USA

SETTING THE SCENE

A big part of our recent technical development drive has seen SAHP have our MBI branded products tested in Chicago to UL standards.

With our BMTB range now all UL accredited we are now working with a number of distributors and

agents across the USA and Canada, one of our first partners, based in the state of New York has ensured that one of the first units into the country was installed in his own home - Seeing distributors install in their own homes is a great way to further promote the benefits of

the system, end users can discuss the system with someone who actually uses it on a daily basis. The system chosen for the install was a BMTB 200 and sits in the basement providing hot water for the whole family, whilst also seeing a massive saving on existing energy bills.
