SETTING THE SCENE

SAHP has made a big push this year to promote our technology and develop relationships with partnering technologies - We have now designed and seen our hot water solution alongside a number of space heating options. One of the latest

projects showcases the benefits of our BMTB working alongside an Air Source Heat Pump (ASHP). For this build a BMTB 300 was installed to work alongside the LG 9KW Therma V - When installing an ASHP you have to provide a cylinder with a

high performance coil as part of the package. All of our BMTBs offer this as well as enabling the ASHP to concentrate solely on space heating - extending the life of the various components found in the ASHP, whilst also increasing the property's EPC score.
