

**BMTB 130
Domestic Home
2019
UK**

SETTING THE SCENE

ONE of our installation partners, Suffolk Facilities Management, has spent a lot of time working with the Flagship Group to create a renewable solution for their social housing stock.

This has seen them introduce our BMTB range

into some of their houses across Suffolk.

Part of our drive this year has seen us work with a number of house builders and housing associations who are looking to reduce CO₂ emissions and eliminate fuel poverty

amongst their tenants. This as a great opportunity to also develop a monitoring system, to enable both us and our clients to understand remotely how our systems are performing and being utilised by the end user.
